

LIVE VIDEO BRACKET

DEMO WALKTHROUGH

Everything a first-timer needs to run a show end to end — create an account, build a video wall, put it on screen, and let a crowd vote from their phones. No installs. No code. If you can open a browser, you can run it.

16 → 4 → CHAMPION

WWW.LLAMAVISION.APP

WHAT IT IS

A TOURNAMENT FOR SHORT CLIPS, DECIDED LIVE BY THE ROOM

Four short videos play **at once** on one screen — a 2×2 wall labelled **A, B, C, D**. The audience votes from their phones; the most-voted clip wins, the wall flashes, and the winner advances. It runs itself, round by round: **16 videos** → **4** → **one champion**. Think "March Madness, but for video clips."

Great for watch parties, classrooms, conferences, team offsites, bar nights — anywhere a crowd enjoys picking a winner together.

THE RECOMMENDED SETUP

THREE SCREENS, EACH ONE JOB

YOU — THE HOST**1 · Control room**

A laptop where you build the bracket and press play.

www.llamavision.app/admin

THE VENUE**2 · The video wall**

A TV or projector showing the 2×2 grid + live tally.

[opened from the session page](#)

THE CROWD**3 · Phones**

Everyone's own phone is the ballot — tap to vote.

lvote.us/your-session-id

Fewer screens? A laptop can run the control room and mirror its tab to the TV; phones still vote. Solo at your desk, open the wall in one window and the console in another and let it play itself (see the 60-second self-demo).

GET GOING

FROM ZERO TO A BRACKET

1

Create your account (one time, ~1 min)

On the computer you'll host from, open www.llamavision.app/signup.

Enter your email, then click **Create account with a passkey** and follow your device's prompt — Face ID, Touch ID, or Windows Hello. **There's no password to remember.**

Prefer not to set up a passkey? Use **"Email me a link"** for a one-tap sign-in instead. You land in your own private workspace — ready to build.

2

Build your bracket (up to 16 videos)

From the control room, click **+ New tournament**. Give it a **Name** and a short, lowercase **Session ID** (e.g. **friday**).

△ The Session ID is what the crowd types to vote → it becomes lvote.us/friday. Keep it short and easy to say out loud.

Open **"Load videos"**, paste up to **16 YouTube links, one per line**, and click **Load videos**. Your clips drop into the **Bracket** with thumbnails and a green **✓ N loaded** badge.

The paste box empties itself — that's on purpose. Your clips moved down into the Bracket. Got one wrong? Click 🗑 **Replace** on that row, paste a new link, and **Save** — it swaps only that slot.

Fewer than 16 is fine. Clips fill A → B → C → D and empty spots stay blank on the wall. The only rule: a matchup needs **at least 2 clips** before you can open voting on it.

SET THE STYLE & THE SCREENS

CHOOSE HOW IT RUNS, THEN GO LIVE

3

Choose how it runs (optional settings)

Auto-run — opening the wall drives the whole bracket hands-free. Off lets you step through each matchup manually.

Demo mode — fast, watchable pace that **loops** until you press Stop. Leave **off** for a real event.

Auto voting — fills in votes automatically so it plays with no phones. Leave **off** to take real votes from the crowd.

(**API enabled** and **Anonymous voting** control partner/embed access — see the admin guide. **Timing** fine-tunes each phase; defaults are fine.)

4

Put the screens up

The wall (TV / projector): click the **Display wall** link and open it on the big screen. **Click it once** to start (browsers block silent auto-play). On a kiosk, use the "**open with autostart**" link.

No console on the venue machine? Anyone can bring up the wall without signing in at

www.llamavision.app/launch — type the Session ID and press Launch.

The voting page (phones): show lvote.us/your-session-id — the easiest way is a **QR code** on a slide so people just point their camera.

Tip: a memorable Session ID makes the lvote.us/... link easy to read on screen and say to the room.

SHOWTIME

RUN THE SHOW

5

Press play

► **Start auto-pilot (easiest)** — fully hands-free. It restarts the bracket from the top, then opens voting, flashes, locks, reveals the winner, and advances on its own, round by round.

Manual — drive each matchup with the bracket buttons: **Open voting** **Flash** **Lock** **Reveal**
→ Advance. Only the steps that make sense appear.

The Final builds itself from the four winners. Advancing it crowns the champion. Press **■ Stop** anytime to send the wall to idle.

From your phone: open www.llamavision.app/admin/control for a big-button remote — **■ Pause**, **► Resume**, **→ Advance now**, **■ Stop**.

6

What the audience does

They open lvote.us/your-session-id (or scan your QR code), see the four clips **A / B / C / D**, and **tap one to vote**.

One vote per phone, per matchup — and only while voting is open. Once the wall flashes and locks, late taps are politely refused.

A tie? The winner is picked at random and the wall says so — **"TIE — winner chosen at random"** — so the show never stalls.

STEP 7 — RE-RUN OR START OVER

RESET TOOLS

Open **Reset tools** at the bottom of the session page and pick the **smallest** one that fits.

Reset voting

Clears votes/winners to run the **same 16 again**. Keeps videos.

Reset bracket

Re-shuffles your 16 into **fresh groupings**. Keeps videos.

Reset videos

Removes clips so you can **load a different 16**. Keeps the session.

Reset everything

Full wipe to defaults (keeps only Name + Session ID).

NO CROWD? NO PREP?

THE 60-SECOND SELF-DEMO

- A Create a tournament (or open a ready-made **Standing demo**).
- B Click **Seed demo bracket**, then **Start rehearsal** — it turns on Demo mode + Auto voting and starts.
- C Open the **Display wall** in another window, click it once, and watch it play itself with pretend votes — **looping until you press Stop**.

That's the entire experience in miniature — the perfect way to see what Llama Vision does before a real event.

QUICK ANSWERS

FREQUENTLY ASKED

Do I need to install anything?

No — everything runs in a web browser; the crowd just uses their phones.

Do voters need an account or app?

No. They open the link and tap. One vote per phone, per matchup.

The wall is black / won't play.

Click it once to start (browsers block auto-play with sound). For a kiosk, use the autostart link.

My pasted list of videos disappeared!

Expected — the paste box clears once it reads your links. Scroll to the Bracket; all clips are there.

One clip shows a broken thumbnail.

That YouTube link likely has a typo. Click  Replace on that row, paste a good link, Save.

Someone says their vote didn't count.

One vote per phone per matchup, and only while voting is open — late taps after the lock are refused.

How do I stop a demo that keeps looping?

Press ■ Stop. (Demo mode loops on purpose until you do.)
